

## Achieving Smart Poultry Farm Operations in the Cloud

Poultry farm operations are an interconnected practice essential to growing and breeding chickens. It involves several factors, such as feeding, vaccination, and maintenance, that challenge the future growth of the poultry industry. Having the main goal to provide customers with a quality product, it needs to meet its per capita requirements by controlling the emergence of poultry diseases, achieving high production, and generating reasonable production costs as it necessitates efficiency across its entire operations. Acumatica with Agriculture Dimensions (AGRID), a vertical solution born-in-the-cloud platform embedded with the Poultry Farm Operations module, provides all functionality to run a successful poultry business.

Poultry owners and operators need to know their costs and potential income to have a strategic business decision for their poultry enterprise. AGRID with Poultry Farm Operations module captures every information in the poultry cycle through customized dashboards where they can monitor real-time activities like feed consumption, vaccination, disease incidents, and livestock readings for immediate farm efficiency. Acumatica with Agriculture Dimensions provides an excellent opportunity to ensure poultry owners receive a significant return on their investment. Users can swiftly review farm activities to ensure they do not deviate from their farm productivity goals. Consequently, creating a better overview and preventive control for a more profitable poultry farm with advanced traceability of all poultry-related transactions.

Integrated inside Acumatica's cloud system provides users valuable insights from anywhere on a desktop or mobile device. It allows them to act quickly and uncover better ways to plan for their short and long-term goals, saving time and money. Digitize the poultry farming business beyond the core to run smarter, faster, and better poultry operations.

## Product Highlights and Capabilities:

<b>Advanced Planning and Scheduling</b>	Address unexpected production changes with more rapid responses resulting in shorter lead times through finite capacity scheduling, employee skill levels, tool scheduling, available to promise, and what-if to core manufacturing.
<b>Poultry Farm Operations</b>	Ensure efficient poultry operations with a streamlined process by monitoring real-time farm activity data such as feed consumption, vaccination, disease incidents, and livestock readings for complete control of the flock in running a successful poultry business.
<b>Advanced Material Management</b>	Streamline the management of project materials, including receipts and issues for purchased materials. Create requisitions with approvals workflow and create purchase orders to ship materials directly to a project location, creating an efficient workflow for job site deliveries.
<b>Project Operations Management</b>	Stay on top of every project and budget using real-time information at your fingertips and gain a complete view of projects, including costs for materials, labor, services, and inventory features.
<b>Manufacturing Data Collection</b>	Improve efficiency and data accuracy by issuing material to production orders, moving production orders between operations, and recording time against production orders.
<b>Estimating</b>	Save time and money by adding simple or complex estimates, revision control, and fixed and variable overheads to your core manufacturing.
<b>Cost Codes</b>	Enhance your account classification with an effective way to organize, manage, track, analyze, and budget project work.
<b>Project Accounting</b>	Handle projects of any complexity across different project types and industries by budgeting and tracking revenues and expenses per project and roll costs up to financial reports with billings based on milestones of project transactions.
<b>Work Order Management</b>	Maximize dispatching and boost revenue by scheduling the right people at the right time and seeing real-time data for work in the field.
<b>Maintenance Management</b>	Create maintenance work orders for field technicians or leverage the native field service application for advanced service dispatch, scheduling, and reporting.
<b>Field Service Management</b>	Manage and schedule service orders and appointments with integrated inventory, labor, and invoicing.

**Acumatica is the only major global ERP player that has NO PER-USER FEES.**

Our flexible deployment and modern growth-friendly licensing puts customers first and are ready to scale with your changing needs. All employees can now use your ERP system and digitally transform your organization.
